Subject ABERDEEN VCM AND LEAD TRAINING PROGRAMS AND CONTRACTOR USE

In general, the content of these programs could be used for contractors, but I feel some deletions and modifications would be necessary. Any part of the program dealing with medical surveillance, personal air sampling, and protective equipment supplied to employees would not apply to contractors in most cases. These sections of the programs could be deleted or shortened, with the addition of verbage specific to contractor procedures in those areas.

I have highlighted the areas of these scripts that should be reviewed in this manner.
