Pydraul 150

Brian K. Rogers
Brussels (Monsanto Europe)

Jerry Davidson has asked me to send you a copy of our toxicity statement covering Pydraul 150. I have enclosed a copy of same for your use. I understand that an engineer with Welman Incandescant in Spain was overcome by Pydraul 150 fumes and spent some time in the hospital. Very frankly, we have always recommended that when our Pydraul fluids are handled at elevated temperatures proper exhaust ventilation must be provided. When Pydraul fluids accidentally are sprayed upon very hot surfaces, respiratory protection must be used until the leak or source is stopped. By and large these fluids are easy to handle and create little human hazard. They will, however, cause difficulty as vapors at high temperatures.
