MEMO TO D Wood 8-30-75

Re Dr. Allen. PCB Wisconsin

At Wisconsin hearing on Aug 28 Dr Allen stated, in response to direct question, that no chlorinated dioxin or dibenzofurans were present in the Aroclor 1248 he used in his testing. Since he called on the day following I suspected someone is trying to convince him that the effects he observed in his rhesus monkies may be due to contaminants rather than PCBs themselves. Paul Wright is anxious to visit Dr Allen

FROM Perhaps both toxicity and furans could be discussed at such a meeting P
