Someplace in the early seventies when OSHA came along, then people became aware of asbestos. At that time I assumed crocidolite was the dangerous stuff that was used in the shipyards or something like that. And I felt the chrysotile was not. I never at that time saw any kind of a study giving an indictment against chrysotile asbestos. So at that point -- now when I decided what was in 1971, 1972, 1973, I have no idea. At sometime along there before they started piling all the information in, I questioned whether there was any fault on the part of the chrysotile asbestos, yes. But when was it, I don't know.

Q Did there come a point where you changed your view to believe that chrysotile does pose a hazard?

A I believe it poses a hazard but I just never believed -- I never believed it was as big a hazard as the crocidolite and the other stuff.

Q So was there ever a point in time where you felt chrysotile did not pose a hazard?

A Very definitely, I'm telling you earlier.

Q When did you change your view on that?

A I have no idea. Someplace in between 1970 when I started with them and 1989 when I left.

Q Do you remember what caused you to change your
