TO B.H. Perkins LOCATION Pigments Department-Research Div., Newark, N.J.

FROM J.W. Clayton, Jr. LOCATION Haskell Laboratory PHONE NO.

TOXICITY OF COATED MICA FLAKES

As we discussed by telephone 1/4/61, the cost of conducting inhalation toxicity studies leading to the determination of the Approximate Lethal Concentration (ALC) would be approximately $4000.00 - $5000.00 for the four compounds listed in your letter to J.A. Zapp of 12/5/60.

It is our understanding, that we will hear from you shortly when approval has been given for this work. In the meanwhile, I am requesting Miss Dorothy B. Hood, Chief of our Toxicology Section to send you appropriate forms for toxicity work. She will be glad to answer any questions regarding types of tests and scheduling.

Note 1/5/61 B.H. Perkins called to verbal approved 4:15 P.M. They could like us to accept a replacement for sample 1600-JC.

TOXICITY OF COATED MICA FLAKES

Re: Your memo of 1/5/61

Confirming our telephone conversation of 1/6/61, please proceed with the determination of approximate lethal concentration of the coated mica flakes.

We wish to replace sample 1680-5C, carbon coated mica (2% C) with a new sample of greater carbon content for the toxicity tests on carbon coated mica. It is our understanding that you will start the toxicity tests on the other three samples (TiO_2-coated mica) without waiting for the new carbon coated sample, since a minimum of two weeks will be required to prepare the new sample. Please advise us of the minimum quantity of carbon-coated flake sample necessary for the test.

Charges for this work are to be divided between two Pigments Department charge codes as follows:

2/3 to Code 8253-4642-005-14

1/3 to Code 8253-4642-003-14
