Per our discussion on 10-7-70, we will shift one man continuous analysis effort from Bio-Test residue studies to Anniston fish studies carried out by Drs. Gunning and Suttkus from Tulane. It is our understanding that the need is currently more urgent for the Anniston data for the semi-annual biological survey. Our projected Bio-Test analysis program reviewed on 9-21-70 will accordingly reflect slippage proportional to the man month effort needed for the Anniston work.

R. E. Keller
