Permanent Plasticizers
for Oakville

2nd Street - J. R. Darby
JOREM - J. H. Orem
Montreal - R. S. Trump
2nd Street - N. W. Touchette

Mr. M. Medgessy
Monsanto Canada, Ltd.
Oakville, Ontario
Canada

In response to requests emanating from Oakville through John Orem and John Brydon, a one-gallon sample of Santicizer 415, our fog-resistant plasticizer candidate, is on the way to you through John Brydon. You should receive the sample from John within the next 10 days to 2 weeks, assuming we'll have no trouble getting the sample through Customs. John will also present you with evaluation information with emphasis on the critical areas of automotive fog resistance and with pricing and availability information.

Secondly, whenever possible, or within the next 2 or 3 weeks, we'll send you a sample of Santicizer 401, our lower cost polymeric plasticizer candidate which John talked with you about as a possible replacement for Paraplex G-54 in your automotive headliner application. Though there may be minor variations in the ultimate product which we'll designate Santicizer 401, this one-gallon sample will probably be typical of what we'll ultimately produce. Since this is a real early sample, screen evaluation and rubber migration data are not yet available but will be available within the next four to six weeks. We're sending you this sample so that you can get an early start on its evaluation, and we'll follow with test data as soon as it becomes available to us.

May we please hear from you as you require additional information.
