new ACOUSTONE EZS SYSTEM

Pat. Applied For

makes it easy to reach and easy to maintain services above the ceiling

Now, you can lower ceiling costs—and reduce subsequent maintenance costs with the EZS System for mechanical suspension of ACOUSTONE, America's most distinguished acoustical tile. These three advantages alone will answer many of your ceiling problems.

ACCESSIBILITY—Tiles lift out readily at any point in the ceiling to provide easy maintenance of services above.

ADAPTABILITY—Ideal for new construction and for lowering ceilings in existing buildings. Simplifies installation of lighting, air conditioning ducts, conduits, plumbing, etc.

ECONOMY—An economical system with few component parts. Tiles go up neatly, quickly, and easily.

Sound control is a job for experts. For complete drafting room details and assistance in planning, contact your nearby ACOUSTONE contractor, or write United States Gypsum, Dept. AF1, Chicago 6.

ACOUSTONE is the original fissured acoustical tile. It is incombustible and has high light reflection. Its beauty and high sound absorption provide the finest in sound control. MOTIFS ACOUSTONE tiles also available in a wide variety of exclusive patterns.
