Pydraul AC Booklet

Your memo 8/14/64

D. A. Allendorf
DALLE

I don't believe we should make mention in your technical booklet of the fact that Liberty Mutual Insurance Company assisted in the sampling and analysis at the Queeny plant. I believe your paragraph beginning at the bottom of the first page should read:

> "Air samples have been taken from a compressor line in a Monsanto plant where Pydraul AC had been used in the compressor for 3 years. Filter paper and silica gel samples were collected.....etc."

The word "proponents" in the last line of this paragraph should be "components."

I believe the last paragraph should read:

> "Although it is not anticipated that there could be any serious hazard from vapors of Pydraul AC if the compressed air is to be used for air line masks, respirators or other inhalation equipment, it is recommended that a filter be incorporated in the compressor air line to remove any foreign matter in the compressed air. Such filter cartridges are commercially available. It is simply good industrial practice to use such a filter regardless of the type of compressor fluid or lubricant."
