WORK REQUEST #67- 59
PRIORITY "A"

Adhesives

With reference to our telephone conversation about the problem United Resins is having with a particular batch of Aroclor 5460, will you please prepare adhesives according to the following formulation.

Aroclor 5460	32%
Elvax	15
Wax	53

The only variable will be the different lots of Aroclor 5460. Please make three different adhesives using the following Aroclor lots.

AI-19
AI-20
AH-375

United Resins has complained that the adhesive made according to the above formulation using Aroclor 5460 from lots AI-19 and 20 does not produce an adhesive with any bonding strength. The same formulation and the same ingredients except a change in the lot of Aroclor 5460 such as that represented by AH-375 produces an acceptable and saleable adhesive.

We have asked United Resins to give us a sample of the so-called bad adhesive but I am not sure they have any to give us. The problem is somewhat urgent since United Resins has asked Monsanto to pay $750.00 for the ruined adhesive. United Resins has also lost their customer over this incident.

According to the Anniston Plant all three lots of Aroclor 5460 that are involved are within specification.

Just as soon as you get some answers, please call me so I can take the necessary action.

Thank you.

Gene
