

AMERICAN SOCIETY of HEATING and VENTILATING ENGINEERS GUIDE, 1928

F	Page		Page
Fans		computation of, loses	16
air delivered by	297	control automatic in industry	245
application of in heating and venti-		emission of pipe coil	70
lating	291	losses from building	3
centrifugal	301	losses from bare surfaces	255
control	301	losses from insulated surfaces	258
disc	301	losses from surfaces exposed to air	
mechanical draft	353, 356	velocity	261
mechanical draft, air handled by	355	sources	52
mechanical system of	291	transfer of, in air conditioning	319
motive power for	301	transmission, calculation for losses	16, 20
noise	304	transmission co-efficients of	21-44
power sources	303	transmission, doors and partitions,	
selecting for exhaust system	347	wood	44
stoker	356	transmission, effect of humidity on	73
Filters and air washers	311	transmission, floors and ceilings	36-38
Fittings lift	184	transmission from wall	
Flow of steam in pipes	90	construction	21-35
Flue	355	transmission, rate of through in-	
gas analysis	355	sulation	258
venting	298	transmission, roof	39-43
Forced draft	354	transmission through windows	44
Foundations	304	Heaters	236
fan and motor	304	air heaters	192, 292
Friction head, curve for	129-130	direct fired	196
Friction in round pipes	307	industrial	300
Frictional resistance	348	rating gas	236
of elbows	348	tempering, temperature regulation	
straight conveyor pipes	348	of	245
Fuel	223	unit	193, 298
oil construction	223	Heating	1
oil for industrial and domestic		air	192, 197, 265, 291
heating	219	appliances, types of gas	230
oils, data on	220	boilers, code for testing low pressure	
requirements for gas heating	236	steam	165
sampling	167	by radiation	57
Furnace	193	central plant, by gas	230
heating	193	central station temperature control	252
performance	206	conduits	262
size of	205	costs with gas	237
standard code for regulating in-		ducts for and ventilating	307
stallation	211	forced circulation hot water	122
		fuel requirements for gas	236
G		furnace fan	192
Gas		gas	229
boilers cross connecting with coal	240	green house system	137
combustion of	234	hot water service automatic tem-	
consumption, average heating	236	perature control	251
flue, analysis	355	oil fuel for	219
heating	229	one-pipe steam system	98, 102
heat value and efficiency	235	plant, chimney size for	161
heating appliances, types of	230	pipe sizes, steam	79
Glass, heat transmission co-efficient of	44	two-pipe steam system	99, 103
		warm air furnace	193
H		warm air, temperature control of	251
Health, effects of ventilation per-		season	1
fection	265	steam system	79
Heat	243	system, hot water	117
automatic control of	243	vacuum pump system	106, 107
automatic control in industry	245	vapor system	100, 104, 105
by single column radiators	59	Hood construction required	345

ALPHABETICAL INDEX TO TECHNICAL DATA SECTION

	Page		Page
Hot water	251	fuel for industrial and domestic	
heating, temperature control	251	heating	219
radiators, automatic temperature		storage tanks for	227
control	250	One-pipe steam system	80, 81, 98, 102
Humidity	279	Ozone	329
air motion and effect on human		capacity of equipment	334
comfort	279	chemical properties of	330
control of temperature and	312	composition of	325
effect of on heat transmission	74	concentration of	333
effect of high temperatures and	268	deodorizing	331
		germical properties of	331
I		physical properties of	329
Indirect	57	uses of	336
Induced drafts, types of	354	use of in ventilation	329, 334
Industrial heating, oil for	219	ventilating unit	335
Industrial plants, unit system of		P	
heating	300	Piping systems	
Infiltration	45	hot water heating	117, 119, 124, 125, 134
calculations for	51	one-pipe	80, 81, 98, 102
Installation of air ducts	309	two-pipe	81, 82, 99, 103
Insulated surfaces	258	vacuum pumps	83, 86, 88, 106, 107
effects of air velocity on losses from	261	vapor	83, 84, 100, 104, 105
heat losses from	258	water supply	147
Insulated tile conduits	264	Pipe sizes	
Insulation	255	description of tables	95
conductivity of	12	domestic water supply	147
economical thickness of	261	general data on	91
for piping in buildings	255	hot water heating	126, 134
importance of installation	263	steam heating	85
proper thickness for maximum		table for one-pipe systems	98
saving	255	table for two pipe systems	99
value of	255	table for vacuum pump systems	106, 107
variation with pipe size of rates of		table for vapor systems	100, 104, 105
heat transmission	258	R	
wall constructions	21-35	Radiating surface of pipes	258
		Radiation	57
L		calculating	71
Leader pipe, capacity of	198	conversion factors	66
Lights, heat given up by	52	direct	59
Losses in duct system	296	for various room temperatures	72
		four column	62
M		hot water	117
Material	339	heat emission of—cast iron	58
drying temperature of	339	heat emitted by	59-70
insulating conductivities of	259	heating by	57
Mechanical stokers	356	hospital	63
Mechanical draft value of	353	hot water	67
Moisture, removal of	339	pipe coil for steam and hot water	70
Motors	301	selection of	71
controllers for	303	single column	59
current	303	three columns	61
electric	302	two columns	60
fan	301	wall	64
		window	65
O		Radiator connections	112
Odors	275	for indirect	115
Oil burners, control automatic	251	typical connection	
Oil	219	for steam system	112, 113, 114
combustion of	223	Radiator	74
fuel data on	220	warming the	73
