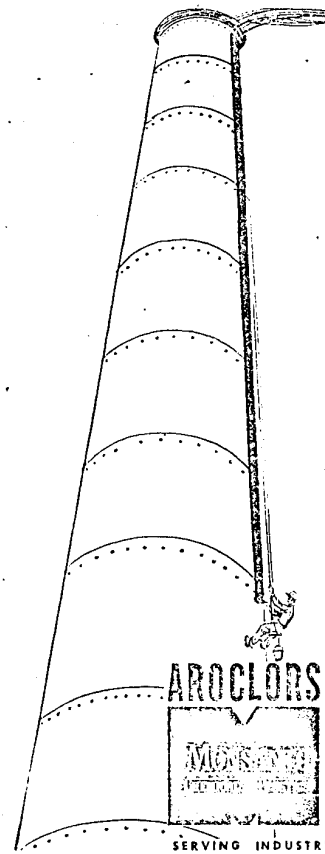
1950 - 1959



PROTECTED... top to bottom

Maintenance paints for metal surfaces exposed to weather, water, acids, alkalis and other corrosive influences, provide greater top-to-bottom protection when formulated with Monsanto AROCLORS.

Because of their protective qualities, the AROCLORS (chlorinated biphenyl and chlorinated polyphenyls) are used extensively in modified and synthetic rubber coatings and in lacquers, hot-melt strip coatings, vinyl protective coatings, maintenance paints, fire-resistant coatings, wood sealer formulations and marine paints.

For technical information, write MONSANTO CHEMICAL COMPANY, Phosphate Division, 1700 South Second Street, St. Louis 4, Missouri.

AROCLOR: Reg. U. S. Pat. Off.
