Refrigerators, household (domestic) (*continued*)
performance, 905
processing, 905
special storage compartments, 901
testing (ASA Standards), 906

Regulators
condenser pressure, 725
condensing water, 730
three-way, 731
two-way, 730
evaporator pressure, 723
suction pressure, 724
Relative humidity
definition, 29
farm crops, 127
drying theory, 129
grain storage, 129
Relays, 173, 176

Relief devices, 732
discharge capacity, 733
functional valves, 733
fusible plug, 732
pressure setting, 733
rupture member, 732
safety valves, 732
Resistance, thermal
air space, 422, 423
building materials, 424–427
insulation, 424–427
still air, 421
Reynolds analogy, 81
Rice
drying, 135
Ringelmann chart, 258

Room air conditioners, 929
classification, 929
codes and standards, 931
future developments, 932
installation and service, 932
performance data, 930
sizes, 929
special features, 930

Rotary compressors, 643
features, 645
bearings, 645
blades, 645
journals, 645
shafts, 645
valves, 646
large units, 647
lubrication, 646
mechanical efficiency, 646
motor selection, 646
performance, 643
types, 643
Roughness, absolute, 91

S

Schmidt number, 77
Secondary coolants, 371
Seebeck effect, 21

Shading
calculations, 523
coefficients, 506–515
devices, 510–515
Sherwood number, 80
Smoke, 147

Sodium chloride brine, 372
properties, 372, 374
specific gravity, 374
specific heat, 374
thermal conductivity, 374
viscosity, 374
Sol-air temperature, 498, 500

Solar heat gain
fenestration, 500–515
factors, 507–510
shading coefficients, 506, 510–515
roofs, 498–502
walls, 498–505

Solenoid valves, 726
application, 728
operation, 727
pilot application, 727
selection, 728
Solubility
critical solution temperature, 789–793, 797–799
oil-refrigerant systems, 784
Sorbents, 261
absorbents, 262
liquid, 262
adsorbents, 264, 266
solid, 264, 266
Sorption dehumidifiers, 262

Sound, 191
absorption, 192, 199, 206–211
analysis of control, 193
attenuation, 192, 199, 202–211
ducts, 202
prefabricated units, 211
control, 191
terminology, 191
decibels, 191, 193
design goals, 193
design procedure, 193
directivity factor, 201
frequency, 192
octave band limits, 192
generation, 202
duct fittings, 205
fans, 202
installation checking, 219
measuring instruments, 220, 259
outdoor equipment, 211
power level, 191
pressure level, 191
room absorption effect, 199
terminal unit selection, 197
vibration isolation, 212
work sheet, 221

Space heaters, 832
construction requirements, 833
controls, 832, 833
efficiencies, 833
floor, 832
gas, 832
oil, 832
performance requirements, 833
room, 832
sealed combustion systems, 833
solid fuel, 832
wall, 832
Specific gravity
liquids, 978
solids, 979, 980

Specific heat
food products, 980–982
gases, 977
liquids, 978
refrigerants, 284–286
solids, 979, 980
vapors, 977
Speech interference level, 194
Spray ponds, 743
Stability index, 235
Standards, 989
Static pressure
control, 559
Steam
tables (thermodynamic properties), 39, 40

Steam-jet refrigeration equipment, 655
basic concept, 655
design considerations, 657
constant area section, 658
ejector suction opening, 658
mixing section, 658
nozzle, 657
subsonic diffuser, 658
suction chamber, 658
typical ejector function, 658
performance, 659
system components, 655
air ejector, 657
condensers, 657
controls, 657
evaporators, 655
steam-jet ejectors, 656
two-fluid systems, 659
Stefan-Boltzman law, 51

Stokers, mechanical, 805
classification, 805
combustion chamber design, 806
combustion process, 805
controls, 806
Storage, 127
farm crops, 127
grain condition, 128
moisture content, 128
oxygen supply, 127
temperature, 127
Surface
conductance, 417
temperature calculations, 448
Surface cleaning
chemical, 227
mechanical, 226

Symbols, 966
graphical, 968
air-conditioning equipment, 970
auxiliary equipment, 973
condensers, 972
controls, 973
fittings, 969
measurement, 975
motors, 972
piping, 968
refrigeration equipment, 971
letter, 966
Greek alphabet, 976

T

Temperature
apparatus dew point, 522
attic, 479
basement, 480
dew-point, 29
dry-bulb, 29
effective winter indoor, 477
ground, 480
indoor design
summer, 487, 494
winter, 477, 478
outdoor design
summer, 488–495
winter, 469–477
sol-air, 498
thermodynamic wet-bulb, 30
unheated spaces, 479
wet-bulb, 30

Terminology, 951

Testing, 761
leak detection, 761
electronic, 761
halide, 761
mass spectrometer, 762

Testing (*continued*)
pressure, 761
water submersion, 761
performance, 762
complete systems, 763
compressors, 762
of component, 764
special considerations, 762

Thermal
conductance, 384
surface, 384
conduction, 49, 50, 68
conductivity, 832
convection
forced, 49, 56
natural, 49, 55
insulation, 70, 381
radiation, 51, 68
resistance, 50
Thermodynamic wet-bulb temperature, 30

Thermodynamics, 1
degradation of available energy, 5
equations of state, 2
first law, 1
principle of increased entropy of the universe, 5
second law, 2
Thermoelectric couples, 22, 27
Thermoelectric module, 27

Thermoelectricity, 21
advantages, 26
applications, 26
design of devices, 27
effects, 21
performance of couples, 22
refrigerating system analogies, 25
Thermometers, 243
Thermostats, 174
location, 177
Threshold limit values, 152–155
Transient heat flow, 71

Tube, tubing
applications, 892, 893
dimensions, 879–881
fittings, 885, 888, 889
joints, 883–885
materials, 877
solder data, 883
Turbulent flow, 58, 79, 89

U

U-value
calculation, 421
ceilings, 436–442, 445
door, 447–448
floors, 436–442, 444
glass, 447–448
partitions, 434, 435
procedure for determining, 421
roofs, 439–443, 446
walls, 428–435, 444
wind velocity effect, 448

Unit heaters, 851
application, 852
classification, 852
control, 855
heating medium, 853
location, 854
maintenance, 856
piping connections, 855
ratings, 854
sound level, 854
types, 852, 853

Unit ventilators, 847
air capacity ratings, 847
application, 849
classification, 847
control, 849
exhaust vents, 850
heating capacity ratings, 849
heating capacity requirements, 848
location, 850
window down-draft prevention, 850
year-round, 851

Unitary air conditioners, 935
applications, 935
classification, 935, 936
design considerations, 936
design details, 937
testing, 940
U. S. Standard atmosphere, 41

V

Valves
characteristics, 888
check, 731
applications, 732
seat materials, 731
condenser pressure regulators, 725
condensing water regulators, 730
application, 731
operation, 730
selection, 730
three-way, 731
two-way, 730
constant pressure expansion, 722
application, 722
operation, 722
selection, 722
control
automatic, 175
butterfly, 175
double-seated, 175
pilot piston, 175
three-way diverting, 175
three-way mixing, 175
end connections, 887
evaporator pressure regulators, 723
application, 723
operation, 723
selection, 723
high-side float, 725
application, 726
operation, 725
selection, 725
low-side float, 726
application, 726
selection, 726
materials, 888
refrigerant reversing, 729
operation, 729
relief devices, 732
discharge capacity, 733
functional valves, 733
fusible plug, 732
pressure setting, 733
rupture member, 732
safety valve, 732
solenoid, 726–729
application, 728
operation, 727
pilot application, 727
selection, 728
suction pressure regulators, 724
application, 725
operation, 725
selection, 725
thermostatic expansion, 717
application, 720
capacity, 718
charge, 719

Valves (*continued*)
desuperheating, 722
flooded system, 721
operation, 717
superheat, 718

Vapor
barriers, 385, 413
effectiveness, 386
properties, 386
types, 386
flammability limits, 156
flammable, 150
transmission, 385, 406
Velocity
coil, 608, 615
distribution, 537
duct, 570
high-velocity systems, 575
measurements, 248
reduction method, 571
Velocity of sound, 286
refrigerants, 286, 287

Vending machines, refrigerated, 917
bottled beverage coolers, 917
cold-wall type, 917
forced-air type, 917
horizontal dry type, 917
canned beverage, 920
coffee, 922
design considerations, 918
air circulation, 919
beverage freezing point, 919
bottle size and shape, 919
equipment evaluation, 920
rate of sale, 918
temperatures, 918
icemakers, 922
post-mix, 920
pre-mix, 921
refrigerated food, 922
refrigeration calculations, 920
standards, 922

Ventilation, natural, 455
flow, 465
due to combined forces, 465
due to temperature differences, 465
due to wind, 465
effect of unequal openings, 465
general rules, 467
types of openings, 466
doors, 466
roof ventilators, 466
skylights, 466
windows, 466

Ventilators, unit, 847
air capacity ratings, 847
application, 849
classification, 847
control, 849
exhaust vents, 850
heating capacity ratings, 849
heating capacity requirements, 848
location, 850
window down-draft prevention, 850
year-round, 851
Venturi meter, 251
Vibration, isolation, 212
natural frequency, 213

Viscosity
liquids, 978
moist air, 46
oil-refrigerant solutions, 789–801
grades, 783
index, 783
recommended ranges, 784
refrigerants, 283
