Viscosity of Aroclor 5460

CEA 2040 - Sol. Aro. Expansion

R. S. Yates - G.O.

R. M. Kounts - G.O.
J. C. Landwehr
M. L. Williams
W. E. Voss
C. R. McIlwain

The viscosity data you requested is attached. The data agrees with Bucknalls curve. The difference between a 100 and 104°C SP material was insignificant. A 5060 sample was run and indicates the necessity for good heat transfer and jacketed lines with Therminol 66. We also checked Sp G as no data was available.
