DESCRIPTION AND REASONS REQUIRED

Proposed Work and Cost

Funds of -----\$ 709
are requested for the purchase and installation of an A.T.
microwave intrusion detection system.

Present Situation

The Chicago Plant, originally part of a multi-building complex, purchased by Cyanamid in 1971, has no fence or other protective barriers to prevent access into our buildings from the North side.

There is a high fence running along the West side of our property which protects us and our neighbors to the North but we are completely open to each other and the railroad siding.

Fencing cannot be installed as our building in some areas is the property line and the two railroad sidings common to both our plant and the North neighbor, Armstrong Container, cannot be enclosed.

Justification

Reviewing the recent security problems with W. K. Fulton of corporate security, and outside contractors, we believe the proposed system to be an effective deterrence to personnel movement within its area.

Last fall the plant had an illegal entry into the plant through this area, followed a short time later by a forced entry through the South gate. An attempt was made by two men to steal pig lead.

There is also evidence that lead has been taken from the plant through the unprotected North side of the plant.

Commercial Factors

This order supports a plant budget for lead stabilizer as follows:

	<u>Sales</u>		<u>Marginal Income</u>		<u>POS</u>	
<u>(k\$/lbs.)</u>	<u>lbs.</u>	<u>\$</u>	<u>\$</u>	<u>%</u>	<u>\$</u>	<u>%</u>
Actual all stabilizers 1980	7,296	5,618	2,451	43.6	1,782	31.
Budget all stabilizers 1981	6,400	5,207	2,337	44.9	1,512	29.

	<u>Sales</u>		<u>Marginal Income</u>		<u>POS</u>	
<u>(k\$/lbs.)</u>	<u>lbs.</u>	<u>\$</u>	<u>\$</u>	<u>%</u>	<u>\$</u>	<u>%</u>
First quarter all stabilizers 1981	1,786	1,336	776	58.1	626	46.8

Details of Proposal

A microwave intrusion detection and alarm system will be purchased and installed so as to cover the North end of buildings 19 and 20 which are now, unprotected. The microwave system will activate a bell alarm if a person enters or leaves the protected area. The foreman will have a key to lock out the system when necessary.

Alternatives Considered

Installation of a photoelectric beam - can easily be defeated by either going over or under the beam. Not effective for our application.

Installation of a fence - this is not practical, since the railroad siding runs between buildings 19 and 20. Continued use of this railroad siding to unload the plant's raw materials makes the use of a fence impractical.

Production Factors

This proposal will not alter production quality or rates.

Contingent Future Commitments

Additional funds could be required to protect the company parking lot adjacent to the plant. The additional cost to repair the fence and install a alarm system would be about \$7,500.

Risks

No operating risks are involved.

Summary

The installation of a microwave intrusion system will protect the North end of the plant.
