G. Campbell	- Public Affairs

1. The statement "24 cases of angiosarcoma out of 10,000 up to 1979" is inaccurate. The year is 1974 and the cases were not 24. Please see John Barr for details.
2. The voice over says VCL can cause "brain cancer" while the titles on screen say "brain damage". Brain damage is clearly inappropriate.
3. Greta Campbell wants you to be sure that APCI wants its name on the tape in view of our desire to sell the business. There is no problem here, maybe just an inconsistency that was overlooked. In any event, you decide.
