Coldbrook. Saint John.,
N. B. Canada.
Oct. 12th 1924.

Mr. Robert A. Kehoe,
Ethyl Corporation.

Dear Sir:

Received your letter of Sept. 30th and I wish to thank you very much for your information. I would like to know, if a man was exposed to these gasoline fumes in a confined place; would it not produce a Heart condition or High-Blood Pressure? I mean, getting in tanks which contain gasoline, without the gas mask. I was told by a safety-first man, a few years ago; who was from New Jersey; that even washing your hands in gasoline could effect your kidneys, as the skin absorbs it and by this way it is carried through the system. When the vapors off gasoline can produce drunkenness it must effect the lungs and system, if exposed to it continually. I don't think there is enough warning giving men, handling these products.

Yours Truly
Charles E. Bartlett
