was received into evidence.)

MR. SMITH: Thank you.

Director of personnel and industrial relations. On occasion of their recent visit here to inspect our progress on the pathogenicity of fiberglass, Dr. Bishop and Mr. Black, same individuals on the cover letter, mentioned to me that this research project falls under your general supervision.

This is what Dr. Schepers wrote to Owens-Corning regarding the fiberglass experiments.

A fourth avenue yet to be explored more satisfactorily would be a study on the capacity of the fiberglass to induce lung cancer.

There is so much propaganda over this issue of lung cancer today, that one cannot omit this study, either to clear the product of all potential blame or to discover in time whether it holds such a danger.

I suppose you already know that asbestos is fairly well incriminated as a carcinogen.

If I could just find one more document or
