Dr. Herbert Blumenthal
Division of Toxicology of
Food and Drug Administration
Department of Health, Education & Welfare
Washington, D. C. 20204

Dear Herb:

Attached is the progress report on the dogs being fed Aroclor 1242, 1254, and 1260.

Dr. Kiplinger, at Biotest, tells me they had a bad pinworm infestation in the colony and he believes that the peritonitis in the dogs fed Aroclor 1254 is a result of this. He does not believe the problem with the weight is entirely drug connected.

Sincerely,

R. Emmet Kelly, M. D.
Medical Director
