In Mr. Wheeler's absence, I am submitting this report in tabular form indicating the acute oral toxicity to mixed sex rats, and the acute skin absorption minimal lethal dose to mixed sex rabbits, of the undiluted samples for a series of Pydraul and MCS preparations, as well as the toxicity classification for each compound by both routes of administration.

Since I could not contact you, I have discussed this form of a report with Mr. Herber and he agreed that this presentation will be what is desired.

If there are any questions concerning these data, either contact me or Mr. Wheeler, who will return to the office on November 28.

William H. Hunt, Ph. D.
