E L Aasen - Portland (typed)

Effective immediately the Consumer Products Safety Commission has voted to ban the use of asbestos in joint system compounds. The only products we currently produce which contain asbestos are Ready-Mix and casein bag goods and we have asbestos free formulas for both of these products. We will immediately begin filling all orders with the asbestos free formula unless the orders are cancelled by the branch.

Pls understand that this presents immediate problems to each joint cement plant. They are not to ship any of their existing stock and must clean their system out to change to 100% asbestos free. There will no doubt be some raw material availability problems during the transition. Your understanding and assistance will be needed during this period.
