Asbestos Monitoring Results
W. Fassuliotis' Letter of March 8

1. Do you agree that we discontinue using Vermont and have all future samples evaluated by EED?

2. In Mr. Fassuliotis' fourth paragraph, I do not understand the final sentence. It reads as follows: "In future sampling, as outlined in the revised guidelines, when average exposures are being evaluated, the need for short term (15 minute) samples to measure peak exposures should be taken."

3. With regard to submittal of a plan of abatement, this has already been done, and no extension of time is necessary.
