nondimensional chemicals?

A A nondimensional chemical is something that takes the form of its container rather than its functional -- an article is something that's functional because of its size and shape and not because of its chemical nature per se.

And a nondimensional chemical is the opposite of that, and that's things that comes in, that, those are things that come in bags, drums, barrels, tank cars, and take the shape of their container.

Q Okay. All right. I have not had the benefit of reviewing your CV. I know that you have produced one in the past, but I haven't had a chance to review it.

Can you take me through quickly your post high school education, just the years you were at which college and what you studied and that kind of thing.

A Okay. 1960 to '62, University of Detroit. Transferred to the University of Michigan in '62 and graduated from there in 1964. My degree was in experimental biology.

I went to work with the city of
