Discuss w/ Cole Done 1-19-77 Hab

This location is currently looking for an incineration system for approximately 200M gallons of phosphate ester hydraulic fluid containing PCB's and also a landfill to take a large amount of solids containing PCB's. We have forwarded to them a copy of the electrical industries commission report with the names of potential disposal sources. They are now evaluating these potentials and are quite concerned as to which companies are state approved. They would feel much more secure if we would be able to support their selections. They do not want to have any future legal actions caused by improper disposal. Neither do we!

Do we have any information regarding which are state approved or do we intend to get involved in this area? not really: we advise customers to check w/ state authorities & find out which disposal co's are approved: also EPA list. We do NOT support customer individual selections of disposal means. as per JCW

The general concensus from Central Foundry is that we ought to be in an advisory capacity re PCB disposal.
