CHLORINATED HYDROCARBONS IN
BRITISH WILDLIFE

R. Emmet Kelly, M. D.

FF

Aroclor

You remember our strategy meeting several months ago on how to react to the adverse publicity that was developing in Europe on chlorinated hydrocarbons. You received a copy of the recent article about polychlorobiphenyl compounds being detected in British wildlife from Mr. Hardy.

It appears that again this thing is coming to the front. If there is anything you believe we should do at this time, please let me know immediately so that we can plan properly.
