Subject: Community Complaint

Kevin Cahill received a telephone call at approximately 5:00 pm on 8/31 from Colleen, a neighbor living in the Lemay area. Colleen had seen a Channel 2 broadcast last week which identified Krummrich as one of the "top ten" polluters and claimed that the plant's emissions contained carcinogens. She was concerned that the Carondelet Plant made similar or other carcinogenic chemicals. Kevin reviewed the products that we make, [redacted], and told her that someone from the plant would get in touch with her.

I returned her call at about 1:00 pm on 9/1. She said that all of her concerns were resolved now. Apparently there has been a foul smell in the area over the past few weeks. She didn't really think it was us, but after seeing the Channel 2 broadcast she got worried. She called St. Louis County and the foul smell has been traced to an MSD problem. I gave her the plant switchboard number, 577-1600, and told her it was a 24-hour number that she could call whenever she had any concerns. I offered to send her additional information on our products, but she said that everything was ok and she didn't need any additional information. She said she didn't have any further concerns about our plant.

Please give me a call at 645 if you have any questions or comments.
