Don Stegen - Houston

CONTACTED: Leon Hunter

AROCLORS: Subject wrote to us requesting samples of Aroclors for use in determination of residue studies. I phoned Hunter to learn which specific Aroclors he might be interested in. He wanted samples of 1254 and 1260. They had done some residue studies on these in the past.

About 6 months ago a cattle feeder in New Mexico had had some cattle rejected for slaughter due to presence of PCB in the animals, and he had inquired of Pope for residue data. Hunter indicated that Pope did no work for this account at that time.

Recently another inquiry from a different individual prompted the current request for samples. Hunter indicated interest was based on use in transformer fluid. I explained that all PCB had been withdrawn from the market for use as plasticizers. For information on transformer fluids I referred him to our functional fluids group.

I told Hunter that only Chlorinated Monophenyls and Triphenyls were now available. He did not request any samples of these.
