JOB #1045

...nners from page 1

...another tack, developer ...urt urged the commission to ... more flexible attitude ...dustry and builders. Hurt ...ed that the plan should take ...unt the growth of the past ...s, and encourage further ...n the same areas. He also ...e advantages of directing ...toward existing roads not ...aveled.

...areas of concern included ...ongestion, social services, ...ilities, and mass transporta-

...nission chairman David Bo- ...thanked the public for its ...nd suggested that the com- ...postpone a work session on ...er until July 29.

...other matter, the commis- ...rd a report on a proposal to create two new Agricultural/Forestal Districts, at Keswick and Kinloch, an area adjacent to Route 231 between Cismont and Cash Corner. The creation of such districts offer landowners incentives to preserve land in its natural state. The commission took no action on the matter. A public hearing on the proposed districts will be held August 19.

The commission also granted a four-month extension of a site plan to the developers of Hollymead Square II on Route 29 North. The extension marks another delay for the builders of the housing development, which include Charles Hurt. Their site plan was first approved in July 1984, then reapproved in January 1986 following unsuccessful efforts to meet drainage regulations.□

Asbestos from page 1

University..."

In 1971 the permissible level of fibers of asbestos in the workplace was 120 for each 10 cubic centimeters of air. The level was reduced to 20 fibers in 1976 and to two by the latest regulations.

Southeastern Shelter was one of the firms which bid for the fireproofing job at the hospital. Its bid was thrown out on a technicality and the bid from W.W. Nash and Sons of Roanoke was accepted. According to Lambert, use of Monokote MK-5 is placing the hospital's future in jeopardy.

"We are not attempting to detract from W.R. Grace's good name," wrote Lambert, "We merely request the University of Virginia to proceed cautiously before they [sic] permit the use of Monokote MK-5. The University is already busy with asbestos abatement of other facilities and it would be nonsensical to be required to remove another asbestos-related product shortly after its application, not to mention the plethora of law suits which could arise."

Lambert's letter says he is not aware that W.R. Grace has certified, as required by EPA regulations, that the Monokote MK-5 contains "not detectable amounts of asbestos" when tested.

Lambert's letter cites court cases where W.R. Grace has admitted that Monokote MK-5 contains asbestos, including a case in Ohio in 1982, *O'Strickler v. Walter Corporation.*

"We suggest that you contact your liability insurance company as to whether they are willing to extend coverage for the use and installation of Monokote MK-5," writes Lambert. His seven-page letter contains 29 pages of documentation on the dangers of asbestos and its relation to Monokote MK-5.

Copies of the letter were sent to U.Va. President Robert O'Neil, Richard Shutts, director of risk management, Richard Hauptmann, project manager, and J. Warren Burch, AIA, chief architect, Commonwealth of Virginia.

According to Tom Doran of U.Va.'s Office of University Relations, Hamner has replied to Lambert's letter of June 26, and copi... Lambert's letter have been sent to Louis G. Martsolf, manager of the architectural and engineering consultants; the Environmental Health and Safety Division of the University and to the replacment hospital's construction manager.

Also, Hamner has asked W.R Grace, the manufacturers of Monokote MK-5 for assurances that it is safe.

If Lambert's charges prove to be true after investigation, Hamner says, according to Doran, steps wil... be taken to make corrections.

Martsolf's comment about ...bert's charges was: "They're a re... hash of what we've gone through before."□
