W. E. Voss

Confirming our phone conversations of 12/2 and 12/5, reference memo attachment defined PCB's as including chlorinated terphenyls. The data included in the packages I sent to Jim Savage on 11/6 and 11/10 did not include chlorinated terphenyl (5XXX series Solid Aroclor and the 4XXX and 6XXX Blend series) data. You are now assembling the package for Bob Pohl and have my memo's to Jim Savage.

The Solid Aroclor data follows:

1. Production operations involving chlorinated terphenyl were shut down by May 1, 1972. The last production was reported as April 24, 1972. Involved would have been Aroclors 5460, 5442, 5432, and 5060. A series of blends in the 4XXX and 6XXX series were also made using 54XX materials, plus various diluents.

2. No analyses were made for chlorinated terphenyls in any effluents.

3. All process residues were landfilled in the same area described in my 11/10/75 memo to J. R. Savage.

4. Quantities of chlorinated terphenyl in process residues are estimated as follows:

Chlorinated Terphenyl to Landfill

Source	Thousands of Pounds 1971	1972
a. Solid Aroclor Process Residue	3,895	1,624
b. Blend Filtration	35	32
c. HCl Off Gas Collection Tank	1	1
d. Miscellaneous	1	1
Total	3,932	1,658

DSW 379281

IN - 10 REV. 1/72

As you are aware, no records exists as to actual quantities sent to landfill. The above figures are based on the best estimates available. None of the information has been reviewed by Legal or Business Group.

Best regards,

W. F. Taffee
