RE: ASBESTOS FIBERS ON FLOOR

As you requested, the dirt on the floor of the marinite shop was checked on August 21, 1974, and found to contain numerous asbestos fibers. One sample was taken at the approximate center of the shop, the other one outside directly in front of the north doors ten feet away. There was considerable dirt at this location.

The blowing of this dirt with plant air is not recommended due to the dispersion of the asbestos fibers throughout the area, nor is hand sweeping a satisfactory solution. It seems that vacuuming would present the best method of cleanup.
