J. E. Flynn, M. D.
Everett Clinic
1719 Hewitt Avenue
Everett, Washington

Dear Doctor Flynn:

Our Seattle office has referred to me your inquiry concerning the composition of Pydraul. We have many types of Pydraul. The composition of these fluids is not divulged because of the trade relationships involved. If you can find out from your patient what particular Pydraul he believes he was exposed to, I would be able to give you a generic classification of the chemicals involved together with what toxicological data we have developed on the particular product. For example, Pydrauls are designated by us as Pydraul AC, F-9, and A-200. If you can get this classification for me, I hope to be able to give you sufficient information for your purpose.

I would appreciate it if you could give me some idea as to how your patient believes he was exposed. Was it vapors at room temperatures or was it a mist and were any other individuals affected? What symptoms did he experience and have you found any particular evidence of systemic intoxication?

Very truly yours,

R. Emmet Kelly, M. D.
Medical Director
