N. W. Touchette - JFQ Research

I attach a call report from Europe which is self-explanatory.

There are two areas of interest:

1. Aroclor 1254 vs. Santicizer 160

   This does not bother me too much as we should still retain the business. I'll suggest Aroclor 1248, or an Aroclor 1254/Santicizer 160 blend to Europe as well.

2. Polysulfide Curing Paste

   This is the serious part although I suspect that Aroclor per se is not to blame. What do you think could cause this explosion. How would you avoid a repitition. Your comments and suggestions are appreciated.

Thank you.
