As part of our hearing conservation program the new signs which state "High Noise Area - Wear Ear Protection" are now available in the plant. These plastic laminated metal signs, which are 11" x 14", have holes in each corner to facilitate installation. They can be obtained from Stores (MCC No. 061161).

Signs must be installed at normal entryways and every 50 feet around the perimeter of 85 dB or higher noise areas. Each unit or department having these noise areas should have maps depicting greater than 85 dB areas.

If you have any questions concerning location of these high noise areas or need additional copies of the map, contact Dan Campbell.

R. T. Hammann
