Dr. A. C. Waldron
The Ohio State University
Pesticide Residue Laboratory Rm.22
Botany and Zoology Bldg.
1735 Neil Ave.
Columbus, Ohio 43210

Dear Dr. Waldron:

Per our telephone conversation of September 17, 1970, I am sending to you two samples (1 - 6oz. plastic bag (A_3) and 1 glass pint jar (B_4) of raw milk (O.D.A. Laboratory No. 41149) to be analyzed for Aroclor 1254 and quantitated. The Ohio Department of Agriculture, Division of Food, Dairy, and Drug Laboratory would like to generate some comparative analytical data as related to Aroclor 1254. Since this laboratory appears to be the only one involved with finding Aroclor 1254, it was thought best that a split sample laboratory analysis check was in order.

This laboratory is appreciative of all your previous support and wish to thank you, in advance, for the attention and co-operation given this matter.

Very truly yours,
Ohio Department of Agriculture

James V. Chambers
Laboratory Supervisor

cc: Dr. David A. Hill, Chief
R. M. Weimer, Ass't. Chief
Carl E. Weaver, Residue Chemist
