Pollution Distribution List

I have enclosed a copy of the Federal Guidelines for Equitable Recovery of Industrial Waste Treatment Costs in Municipal Systems put out by the Environmental Protection Agency Water Quality Office and dated May, 1971.

It is extremely important if you discharge to a municipal sewer any portion of the plant waste to read and understand this draft and the subject it covers. For a municipal facility to receive federal grant money under Section 8 of the Federal Water Pollution Grant Act, the municipality must meet several requirements. One of these requirements now is that the municipality have an acceptable industrial rate formula. Last October the EPA Water Quality Office put out internal guidelines which stated very simply that EPA expected municipal grant receivers to have a rate schedule which indicated full recovery from industry for the capital and operating expenses occasioned by industry with no credit for taxes paid. These formal guide lines, a draft of which is enclosed will evidentally become part of the federal law.

Please check where you stand in connection with the rates and what may happen if the municipal facilities into which you discharge seek federal grant money in the future.
