Santicizer 1172 is Monsanto Canada Ltd trade name for Tri Alfol 610 trimellitate.

Recently we have manufactured 50,000 lbs for Monsanto Japan. As far as we are concerned, this product is more economical to manufacture than S.1170 (tri 2-ethyl-hexyl trimellitate). We wish to offer S.1172 to the Canadian market, and we are anxious to establish a data sheet as quickly as possible. We would appreciate receiving a photocopy of competitor's bulletins or any data you have in your files on S.1172. Also we have sent to your attention a one gallon sample of S.1172 for your information and evaluation.

We understand that your evaluation of HA 380 as secondary plasticizer is not promising in several respects. We suggest to discontinue evaluation of HA 380 but we appreciate receiving confirmation of your findings.
