re AROCLOR® 1260

Dear Kep:

I spoke with Dr. Renate Kimbrough of the EPA in Chamblee, Georgia regarding our proposed visit to her to discuss bladder pathology in rats fed this product. I indicated to her that we expected to have all of the available bladders examined by the latter part of November, and that we would confirm a specific date beforehand. The express purpose of the visit is to exchange information, i.e., view the slides she has, and let her see any slides that Don turns up which may be of interest. This was agreeable to her. She suggested that we might bring extra slides for referral to NCI, if we so desired.

After Don has finished his evaluation of the bladder sections, and after you and he have had a change to review his schedule, I would appreciate a couple of dates that would be convenient for a trip to Chamblee so that I may schedule a visit there.

Kindest personal regards,

George J. Levinskas, Ph. D.
