Pydraul Reclamation

C. L. Bradford
T. L. Gossage
N. T. Johnson
W. W. Overall
W. R. Richard
J. R. Savage

H. S. Bergen

Following our last meeting, it was agreed that a strategy on reclamation should be prepared as a vehicle for future discussions with Cunningham and any other persons who would be involved in approval. Corey also expressed particular concern about pydraul disposal at Findett Service Company if we had an on-going program.

Attached you will find a reclamation strategy prepared by Overall with help from Bradford and Davidson.

Also attached is a discussion of the treatment of Findett's pydraul losses. You will see that some steps are necessary to create a clean system at Findett. An annual burning cost of around $5000 will also be incurred. We should assume that Monsanto will likely bear this cost in one form or another, since Findett, operating solely on his own, would probably see little need to go through all of these procedures.

I have attached as reminders, two items we've discussed before, one being the slopes on PCB elimination at various conditions of recycle and the other being a listing of some of the plusses and minuses associated with going into reclamation.

I will look for feedback next week from the copy addressees and be prepared to discuss with you any additional items you might want on March 20.
