Mr. Joe Crosse

Krummrich Plant

BIPHENYL STORAGE CAPACITY

Mr. Morris has asked me to pass along to you the storage requirements that we foresee for Biphenyl at the Krummrich plant. In his recent memorandum he indicated that there was no need to be bound by past understandings on Biphenyl storage requirements. Therefore, it is suggested that a storage tank be provided to hold approximately 300,000 pounds of Biphenyl. We cannot foresee the need for storing any quantity above this figure.
