BUSINESS GROUP MEMBERS

Organic Chemicals Division

Here are your copies of four Product Information Bulletins --- The Pydraul® Fact Finder (Air Compressors), Pydraul Selector 1 (O/FF-3), Pydraul Selector 2 (O/FF-11), and Pydratek®-100. The first three brochures contain complete information on the full line of Pydraul fluids including properties, performance, conversion data, and availability of related supplies. Pydratek-100 is a fire-resistant preservative used primarily to preserve hydraulic systems in storage that are destined for military use, i.e. hydraulic systems on airplanes.

You may wish to note this new literature on page 2 of your Functional Fluids Literature Summary, dated January, 1968. PYDRAUL AC FIRE-RESISTANT LUBRICANT brochure should be eliminated from this list, all copies discarded, and the enclosed new PYDRAUL FACT FINDER added to the list. All existing copies of PYDRAUL SELECTOR 1 in standard technical bulletin format should be discarded. They are superseded by the enclosed new PYDRAUL SELECTOR 1. PYDRAUL SELECTOR 2 (O/FF-11) should be added to the list. Technical bulletins dealing with Pydraul 135 and 312 are outdated by Selector 2, but may still be used at your discretion until available supplies are depleted. Eliminate CONVERTING TO PYDRAUL HYDRAULIC FLUIDS from the list and discard all copies: this information is covered in Selectors 1 and 2.

Additional quantities of these Product Information Bulletins are available on request from Literature Department, South Second Street, St. Louis, Missouri.
