Mr. Donald Swanson
Aerometry Division
National Air Pollution Control
Administration
1055 Laidlaw Avenue
Cincinnati, Ohio 45237

Dear Mr. Swanson:

As per Elmer Wheeler's 1-14-70 letter, I am sending a copy of a method we have employed for the analysis of water and sediment for polychlorinated biphenyls (PCB).

From time to time, we have done some air sampling which I assume is more pertinent to your needs. We usually draw 200-250 liters of air through sec-butanol in a trap of some sort. The alcohol is then diluted with a large excess of water and extracted with hexane (a more suitable solvent for electron capture gas chromatography). The hexane is then washed several times with water to remove any residual alcohol and the hexane extracts analyzed for PCBs as outlined in the enclosed method. It occurs to me that an alternate solvent to sec-butanol, which might be even better to work with is dimethyl formamide. It is less soluble in hexane and it has the necessary characteristics for air sampling. We have not tried this but it appears to be worth looking at.

If I can be of any further assistance, please don't hesitate to call me collect at - Area Code 314, 621-4000, Extension 3480.

Sincerely,

E. Scott Tucker

We will be happy to discuss our analytical work on PCB's with G. Telling of Unilever Research Colworth when he visits the USA in June. I suggest that we offer to accommodate him for one day if he wishes to arrange his schedule accordingly. Please advise as to the action needed on our part.

Bill Papageorge, Jack Garrett and I attended a meeting on PCB's called by the Pollution Control Administration in the USA (Duluth, Minnesota) this week. This was originally set up as an office type meeting. It quickly got out-of-hand on the number of attendees. Fifty representatives of government and university laboratories in the USA and Canada attended to hear Monsanto's position on PCB's in the environment and especially in water. These representatives have shifted their emphasis to PCB's from pesticides. They have developed enough experimental evidence on their own to convince themselves that the PCB contamination is real.

In short, a massive nationwide PCB program is unfolding in public agencies in the USA. One possible future result of this effort will be the setting of limits for PCB's in the environment. We provided methodology packages representing the state-of-the-art in our laboratories at this meeting.

We will keep you posted on further developments.

Bob K.

Dear Sirt

I plan to begin electron capture gas chromatographic studies on polychlorinated biphenyls and would appreciate it if you could provide me with samples of Aroclor 1254 and 1262. Part of the work will consist of attempting to synthesize biphenyls with various degrees of chlorination. It would limit the amount of synthetic work if you could include samples of chlorobiphenyls such as the mono and dichlorobiphenyls which Harold Weingarten mentioned in his article in Analytica Chimica Acta 26: 391-94 (1962).

Thank you very much.

Yours very truly,

Frederick A. Beland

Dear Professor Beland:

Your March 27 letter requesting samples of Aroclor 1254 and 1262 has been forwarded to my attention. We are sending samples of Aroclor 1254, 1260 and 1262 representative of our current production material, under separate cover to your attention. Also being sent under separate cover are 20 milligram amounts of the 4-, 2,2'-, 2,3'-, 2,4'-, 2,5', 3,5', 4,4' isomers. We are unable to provide absolute purity data for these materials. Unfortunately, we have no additional isomers for your studies.

We are also enclosing a packet of methods representing our current state-of-the-art for PCB's.

Sincerely,

Robert K. Keller
Manager
Applied Sciences Section

Executive Office Building
Washington, D.C. 20506

Dear Dr. Burger:

During our recent meeting in your office, you requested information on the physical properties of the chlorinated biphenyls which are produced by Monsanto. Enclosed herewith you will find the necessary information and, in addition, I give below water solubilities of Aroclors 1242, 1248 and 1254.

Aroclor 1242	-	200 parts per billion
Aroclor 1248	-	100 " " "
Aroclor 1254	-	50 " " "

I apologize for the delay in supplying this information but I have been waiting for the latest water solubility figures from our research facilities.

Sincerely,

John Mason
Assistant General Manager

Dr. E. H. Dustman, Director
Department of the Interior
Fish and Wildlife Service
Patuxent Wildlife Research Center
Laurel, Maryland 20810

Dear Dr. Dustman:

My apologies for not answering your letter of May 7 sooner. I have just returned from a three week business trip in Europe and I'm finally starting to catch up with my correspondence.

We are sending 20 milligram amounts of the following isomers to the attention of Mr. William L. Reichel, Chief Chemist, Patuxent Wildlife Research Center, Laurel, Maryland 20810. We regret that we do not have larger quantities of these isomers for your use. We can make no comment about purity of these materials and suggest that they should be checked in your laboratories.

2,5,2'
3,4,2'
2,3,2'
2,5,4'
3,5,4'
2,3,4'

We hope that these isomers will prove useful in the analytical aspects of your work. If other isomers in the higher chlorine numbers become available in the future, we will alert you of this availability.

Please let us know if we can be of further assistance.

Sincerely,

Robert E. Keller
Manager

Dear Dr. Richard:

This is a letter follow-up of our telephone conversation on September 21, 1970, concerning shipment of ten-pound amounts of Aroclors 1242, 1248, 1254 and 1260 to:

Dr. Theodore M. Farber
Chief Biodynamics Section
Special Pharmacological Animal Laboratories
SPAL (BF-149)
Food and Drug Administration
200 C St. S.W.
Washington, D.C. 20204

Dr. Farber primarily intends to study the effects of these chemicals on microsomal drug metabolism in the rat, dog and pig and to search for possible in vivo interactions with drugs, food additives, pesticides and other chemicals. For any additional questions, Dr. Farber can be contacted on area code 301-776-6311.

We thank Monsanto for their cooperation in supplying these chemicals for these special studies.

Sincerely yours,

A.R. Glasgow, Jr.

Dear Dr. Wheeler:

I am sorry that I was not present when you visited our laboratory on September 24, 1970. I have been informed that you inquired if we had tested the pure isomers of PCB that were mentioned in Mr. Robert Keller's letter of June 5 to Dr. Dustman. I regret to inform you that I never received the supply of isomers. Perhaps they were lost in the mail. I would appreciate receiving the isomers if they are still available.

Thank you for the copy of your analytical methodology for analyzing and identifying polychlorinated biphenyls.

Sincerely yours,

William L. Reichel
Chief, Section of Chemistry
