June 5, 1941

General Radio Co.,
Cambridge, Mass.

Gentlemen:

In April 1940 you gave us certain recommendations regarding equipment for the determination of the power factor of liquid dielectrics. At that time you advised that the Mico Instrument Co. of Cambridge made a Davidson oil cell which you regarded as satisfactory as a test cell for the dielectric. We recently (May 1st) placed order with you for oscillator, capacitance bridge, and null detector and wrote Mico for details and prices of their oil cell but to date have had no reply. Is Mico Instrument Co., Cambridge, Mass. a satisfactory address for inquiry or do you know of any reason why a reply should not be expected? Your early advice will be greatly appreciated.

Yours very truly,

A. B. Gerber, Chief Chemist,
Anniston Plant
