Scruggs

Confirming our conversation of June 22, 1971, we did not and do not agree that the no asbestos test material being shipped to GAF plants and Anco Insulation can be no asbestos on the inner layer and regular Calsilite on the outer layer. One of the keys to be determined by the test installations is whether no asbestos Calsilite will hold up without cracking when installed on high temperature lines in double layer. It is my understanding that Gloucester will arrange today to make the outer layer mixes for the subject jobs in the no asbestos formulation and will hold the shipment to Anco until the correct material is made.
