Asbestos & Health
Medical Reports - Scotland.

Whilst unable at this stage to divulge the source of my information, given in strictest confidence, outside our Group, it is understood that the City of Glasgow Corporation and local Trade Union authorities have recently and currently conducted a large scale investigation into 'community Hazards' associated with asbestos.

Dr. J. Cuthbert and Dr. C. Gold of Pathology Dept., (Chest Clinic), Victoria Infirmary, Glasgow, have evidently conducted an investigation on behalf of the Glasgow Corporation and reported at some length on a major number of cases of asbestosis and mesothelioma found in a wide diverse character of occupations - e.g. Porters, Plumbers, and Housewives etc., Dr. Cuthbert is Consultant Chest Physician to the City of Glasgow and has also evidently published a relevant treatise in the medical journal 'Europa'.

Prof. Main, Dr. J.T. Sanderson and Dr. T.D. Guthrie have also conducted an investigation on behalf of the Trade Unions and associated with Dr. R. Murray (Medical Advisee to the T.U.C.) in this matter.

It is understood that part of these investigations included a survey of conditions related to 'Marinite' boarding being used in construction of the major multi-storey flats (highest in Europe) at Red Road scheme in Glasgow. We are in fact applying our S.L.A. insulation on this project but have no indication yet of our Operators being questioned.

You may already be aware of this subject matter but if not please let me know in order that I may follow-up in an endeavour to obtain copies of the various Reports by these medical men.

A.B.BOATH
