Johnson & Johnson
BABY PRODUCTS COMPANY

RARITAN, N.J. 08869

March 25, 1977

TO: H. Kramer

SUBJECT: WORLDWIDE QUALITY CONTROL TESTING OF RAW TALC

Further to my memo March 15th, the Baby Products Company management concurs with our attached proposal for key station quality control of raw talcs for freedom from asbestos.

The complexities of this type of analysis require consultant laboratories with experience and established analytical competence in the right fields of mineralogy. We are presently in the process of identifying consultants who can be considered for undertaking this work for our affiliates. BPC will then select the laboratory and put this testing scheme into practice.

Please note that the Worldwide Talc Monitoring program, which has broader scope and intent, will continue in its entirety under BPC. We will also continue to issue the list of Confidence Categories rating all the talcs in use.
