Roberts, right, relate to your study.

A Well, it is a little -- the work is a little more intense because of the numbers that were involved, but basically the levels, you can see for the area monitoring on a time-weighted average, the numbers that were provided by the report indicate that the levels are .05 to .06 fibers per cubic centimeter.

These are the numbers, the fibers that are regulated fibers, the ones that are required to be monitored by OSHA, so these levels are very, very low, and, again, this was in a sanitation department and then in a traffic department, and .06 or .07 and when you get down to police vehicles, it is .02 to .07.

Q Did your review of these studies, both the ones we are talking about right now, and the remaining studies in your chart, give you any information about the site where the study was conducted?

A Yes, they did.

Q Okay.

A That is what -- there are three sites in
