vicinity -- is that about 52 percent of the people in that group, that cohort, who died of asbestos-related disease?

A 52 percent have died from those three main diseases.

And there is another group that died of cancers such as laryngeal cancer, cancer of the esophagus, pancreas, which the incidence of death is lower, but significantly over what is seen in the background population.

Q Now, in your opinion, Dr. Hammar, does silica or sand contribute to the disease mesothelioma?

A No.

Q Does gypsum?

A No.

Q Does lime?

A No.

Q Does anything else besides asbestos in the United States contribute?

A Not in the United States. The only other
