PLAINTIFF'S EXHIBIT WRG-417

Ray B. Taylor and A. A. Greer of A. A. Greer Company, lath and plaster contractors, stand in front of their latest job, the recently completed Great American Reserve Insurance building in Dallas. The building was fireproofed with direct-to-steel application on the floors and beams. Columns were fireproofed with self-furring metal lath and lightweight plaster. Materials used included Zonolite Mono-Kote and Zonolite Plaster Aggregate.

Another big Texas job for A. A. Greer and Zonolite Mono-Kote

Most of the buildings on the skyscraper skylines of Houston, Dallas and Fort Worth have been fireproofed by lath and plaster contractor A. A. Greer. His company is a big user of Zonolite products... Zonolite Mono-Kote especially.

Mr. Greer and his associate, Ray B. Taylor, Jr., explain why. "Mono-Kote is very workable. And once it's sprayed on, it stays on...you don't get slides or drop outs. Mono-Kote dries hard, not punky, so when electricians make a hole, only the part they hit comes off. When we can get a fireproofing material like this, it just makes sense to use it."

We think you'll like Mono-Kote for these same reasons. For further information about Mono-Kote, the spray-on, direct-to-steel fireproofing, call your Zonolite representative.
