File

In addition to the item covered in my letter of 12/6/76 to E. R. Albritton, there are two other safety concerns which are hereby reported to you for consideration by the LP & S department.

1. At several places in the plant there are interferences with the safe use of ladders in units or pipe racks. Four of these locations are marked on the attached map. A picture of one is also attached. You may wish to have your inspectors check these with the owning departments and have modifications made if advisable.

   In addition, our Engineering Supervisors are requested to bring this to the attention of our project engineers and draftsmen, as a practice to be avoided. It is also recommended that it be called to the attention of CED through LP & S and SAPP.

2. A suggestion was made to put translucent panels in solid doors which have relatively heavy traffic. The specific one cited is the door to the men's restroom south of the Office Services area in the Office Annex.
