Subject: RE: FDA Listing for Fiberloc Mtls

Can we conclude from Connie's note that the KM365 used in 925GR30 has FDA approval? If so, it might be easier to replace the KM680 currently used in the 808 (as we plan to do in the weatherable formulations) and to convert our 902 customers to 925. This assumes that we can obtain approval on the other ingredients on Connie's list.
